**Practical 3:**

a. Create a simple web page with various server controls to demonstrate setting and use of their properties. (Example: AutoPostBack)

Code :

```
protected void Name_TextChanged(object sender, EventArgs e)
{
    String str;
    str = Name.Text;
    Label2.Text = str;
}

protected void DropDownList1_SelectedIndexChanged(object sender, EventArgs e)
{
    Label3.Text = DropDownList1.SelectedValue;
}

protected void CheckBoxList1_SelectedIndexChanged(object sender, EventArgs e)
{
    Label4.Text = "";
    foreach (ListItem x in CheckBoxList1.Items)
    {
        if (x.Selected)
        {
            Label4.Text += "<br>" + x.Value;
        }
    }
}

protected void ListBox1_SelectedIndexChanged(object sender, EventArgs e)
{
    Label5.Text = "";
    foreach (ListItem x in ListBox1.Items)
    {
        if (x.Selected)
        {
            Label5.Text += x.Value;
        }
    }
}

protected void RadioButtonList1_SelectedIndexChanged(object sender, EventArgs e)
{
    Label6.Text = RadioButtonList1.SelectedValue;
}

protected void Button1_Click(object sender, EventArgs e)
{
    Label7.Text = "Record Submitted";
}
```
